

Sentry Vision®

Video Management System
Managing all recordings
in a single application

Sentry Vision® is a video management system that enables businesses to capture, record, store, retrieve, view, and analyse collected images from their surveillance cameras. This software centralises, manages, processes, and controls the recordings from multiple surveillance (CCTV) and periscope cameras in a single system.

It provides a single interface to monitor all the Seamless Journey ecosystem cameras and provides a high level of security, with the goal to investigate threats and risks, while enabling agents to stay alert for suspicious activity.

This system is highly scalable: it enables support of the touchpoints' cameras spread across multiple sites into a single application.

Security is the core of this solution, which allows the monitoring of live records and reviewing of camera footage. This is an essential tool in the context of airport use cases and border control to be able to review any incident at a touchpoint or to audit any access granted or denied by the system.

Sentry Vision® is compliant with highly regulated environments, it assists in cases of investigations, audits and legal or claims issues by establishing automatic retention policies and storing surveillance video for designated periods of time.

Sentry Vision as part of Seamless Journey Platform®

In a border control or travel environment where eGates process passenger identification and the Inspector software is the tool that monitors these traveller self-service processes, **Sentry Vision®** is the additional potential to manage all footage that has been stored for audits, investigations or any other incident.

Main features

Record: Continuous or event driven recording of footage for a configurable retention period

Playback: Synchronized Playback of multiple Cameras and video control: Play, Pause, fast forward and fast rewind

Live: View footage from multiple sites with up to 64 panels per screen. Spread views through multiple screen and layouts

Export: Export video from one or multiple Cameras, in different video format and in password protected files

Manage: Configure sites and cameras in folders, define e-maps of cameras and user permissions
